

Pre-Class — Session 4 (Produce With GenAI)

~30 minutes.

Do this before Session 4

1. **Flesh out your module skeleton** — the file structure and student-facing shape, with the scaffolding level decided for each piece and access built in.
2. **Have your Decisions doc in hand** — and your course folder — you'll feed them to GenAI in class.
3. **Read the guide, Section 6 (Produce With GenAI)** — including 6e, the loop with an agent — and skim **Section 6b (the Review Council)**.

Come ready to

- Produce your module's content with GenAI under the guardrails — chat or agent, your choice — and start your build.
- Start your **AI-direction + verification log** (the template is in your fill-in file): one row per run, chat or agent.
