Guide-to-Sessions Crosswalk

*How **How to Build a Course** (the Guide) maps onto the five pilot sessions, both directions. **If you're taking the pilot**, use Direction 1 to see which Guide sections back the session you just sat in, and Direction 2 to find where a section you're reading gets taught. **If you're working through the Guide on your own**, read Direction 1 as a suggested five-part sequence — it's the order the material is taught in when there's a room, and it works just as well alone.*

Direction 1 — Session → Guide (what each session covers)

Session	Guide sections it teaches
1 — Decide & Write Objectives	§0 The Big Picture · §1 Start With Decisions · §2 Write Learning Objectives · **Appendix A** (Bloom's Taxonomy) · §7 Set Depth *(as objective altitude)*
2 — Master Design Document	§3 Pressure-Test With the Seven Practices *(the **reminder → feature** move + §3's extraction-map worked example; **Appendix B** question bank)* · §3.5 Decompose Into Modules / Backward Design *(the 7-step procedure on the **Decompose worksheet**, incl. surfacing each module's features via the seven practices)* · §7 Set Depth *(as scope + time)* · §4 Build the MDD *(+ Coherence check #1)* · §6b the **Design** Council · **Appendix D** introduced *(craft notes — the how-to-build reference for each feature)*
3 — Structure the Module	§5 Structure the Module / Three Packages *(lay the packages out — the features are already in your MDD; you produce them in §6)* · §8 Design for All Learners (UDL / accessibility) · §7 Set Depth *(trimming oversized modules)*

Session	Guide sections it teaches
4 — Produce With GenAI	§6 Produce With GenAI Under Guardrails · §6b the **Review** Council · §6c The Comprehensiveness Check · §6d Pick the Tool That Fits the Artifact · **Appendix D** applied *(the craft when you actually build each feature)*
5 — Teach-Back & Feedback	§5's "anyone can teach this" *(portability, tested live)* · **Teaching It Well** *(the craft)* · §9 Evaluate & Improve · §9's syllabus note *(assembled last)* · §6b the whole-course Review Council

Spans every session (not tied to one):

- **§10 Templates & Checklists** — a template is used live in each session (Decisions → Objectives → seven-practices audit → **Decompose worksheet** → MDD → Module Skeleton → the production loop).
- **Appendix C — Frameworks This Guide Stands On** — the foundations under the whole method; background reference.
- **Front matter** ("Why I Wrote This," "How to Use This Guide") — Session 1 pre-reading.

Direction 2 — Guide → Session (when you read the Guide, when it's taught)

Guide section	Taught in
Why I Wrote This · How to Use This Guide	Session 1 pre-reading
§0 The Big Picture	Session 1 (1.1)
§1 Start With Decisions	Session 1 (1.3)
§2 Write Learning Objectives	Session 1 (1.4–1.5)
§3 Pressure-Test With the Seven Practices *(incl. the **reminder → feature** move + worked example)*	Session 2 (2.3)
§3.5 Decompose Into Modules — Backward Design, the 7-step procedure, **surface features** (seven practices per module), the **Decompose worksheet**	Session 2 (2.4)

Guide section	Taught in
§4 Build the Master Design Document	Session 2 (2.5); Coherence check #1 assigned in 2.6
§5 Structure the Module (Three Packages) — *structure* the packages; produce them in §6	Session 3 (3.3–3.4)
§6 Produce With GenAI (Under Guardrails)	Session 4 (4.2 loop · 4.3 guardrails · 4.4 planted error)
§6b The Two AI Councils	**Design** Council → Session 2 (2.4); **Review** Council → Session 4 (4.5) + whole-course in Session 5 (5.4)
§6c The Comprehensiveness Check	Session 4 (4.5)
§6d Pick the Tool That Fits the Artifact	Session 4 (4.2, background)
§7 Set Depth: How Far Down Do You Go?	Session 1 (altitude) · Session 2 (scope + time) · Session 3 (trim)
§8 Design for All Learners (Accessibility)	Session 3 (3.3, UDL)
§9 Evaluate & Improve	Session 5 (5.3)
§9 — Front it for students: the syllabus	Session 5 (assembled last); introduced Session 1
§10 Templates & Checklists	Every session (one template each)
Teaching It Well — The Craft That Carries It	Session 5 (5.1–5.2); applied throughout
Appendix A — Bloom's Taxonomy	Session 1 (1.4)
Appendix B — The Seven Practices: Full Question Bank	Session 2 (2.3)
Appendix C — Frameworks This Guide Stands On	Background reference (all sessions)
Appendix D — Building the Seven Features (Craft Notes)	Introduced Session 2 (2.3); the how-to-build reference through the build (Sessions 3–4)

Three things worth knowing

1. **The two councils are taught in different sessions on purpose.** The **Design** Council (four advisors who *want different things*, used *while you design* and cut) lands in Session 2, where you're deciding what stays. The **Review** Council (four *cooperative* reviewers of a *finished* draft) lands in Session 4, after there's something to review — and returns in Session 5 run on the whole course. Same idea, two moments; §6b names both.

2. **§7 Depth is taught three times, by design.** It shows up as *objective*

altitude in Session 1 ("aim at the highest level the content honestly supports"), as *scope + time* in Session 2 ("depth drives time; time fits your container"), and as *trimming* in Session 3 ("one coherent capability per module"). Depth isn't a one-time decision — it's the recurring discipline that keeps scope honest.

3. **The seven practices recur across the whole build — they don't finish in Session 2.** Like depth (above), they're a recurring discipline, not a single step. You first meet them as a *move* in §3 (a **reminder → feature**, taught live with the extraction-map worked example, Session 2.3), but they come back at every scale:

   - **Course level — the audit (§3, Session 2.3):** run once against your objectives + Decisions, surfacing course-wide features.
   - **Per module — surface features (§3.5, Session 2.4):** run them again over *each module's* objectives on the **Decompose worksheet**, naming that module's features *before* the fit-check sizes them.
   - **Placed (§4, Session 2.5):** each feature lands in a module row of the MDD.
   - **Structured (§5, Session 3) → built (§6, Session 4):** you lay the features out in the three packages in §5, then *produce* them with GenAI in §6 — **Appendix D** gives the craft for each, and the teaching guide is written here, once the materials exist.
   - **Checked (§6b):** the **Review Council** scores it (Session 4; whole-course in Session 5).

   So the §3 audit is the *start* of a chain, not a one-off — and **Appendix D** is the bench reference you return to every time you actually build one of the features it named.
