Pre-Class — Session 4 (Produce With GenAI)

~30 minutes.

Do this before Session 4

1. **Finish your module folder and your Module Skeleton Map** — every file renamed to your form or deleted; the map's parts C and D done: the rung for each student piece, and the agenda sketch with first estimates. If it runs past your container, fix it on the map now.
2. **Have your Decisions doc in hand — and your course folder** — you'll feed them to GenAI in class.
3. **Read the guide, Section 6 (Produce With GenAI)** — including **6e, the loop with an agent (AI-6.1 to AI-6.6)** — and skim **Section 6b (the Review Council)**.

Come ready to

- Produce your module's content with GenAI under the guardrails — chat or agent, your choice — and start your build.
- Start your **AI-direction + verification log** (the template is in your fill-in file): one row per run, chat or agent.
