

Paired Brew — Recipe Card (FILL-IN) — FULLY SHOWN

Shown at full depth to demonstrate **non-code scaffolding**. The Guide’s “fill-in-the-blank” is code-flavored (____, `TODO`); here is the *same gradual-release idea* in a hands-on, non-code course. You complete the blanks from the live demo, then brew it with your partner.

This is the “**we do**” rung: the structure and the steps are given; you fill the *decisions* (the numbers and the cues) so you have to understand them, not just copy.

Fill these in from the demo

Variable	Your value	(Why it matters — already given)
Coffee : water ratio	_____ g : _____ g	Controls strength
Grind size	_____ (coarse / medium / fine)	Controls extraction speed
Water temp	_____ °F / just off boil	Too hot = bitter, too cool = sour
Total brew time	_____ (target ~_____)	Your check that grind is right

Steps (given — follow in order)

1. Rinse the paper filter with hot water; discard that water. (*Why: removes papery taste, warms the dripper.*)
2. Add ground coffee; tare the scale to zero.
3. **Bloom:** pour _____ g water (about 2× the coffee weight), wait _____ seconds. (*Fill from demo. Why: lets gas escape so water can extract evenly.*)
4. Pour in slow circles up to your total water weight.
5. Note the finish time. Compare to your target above.

Partner roles (switch after this brew)

- **Brewer:** pours and keeps time.
- **Caller:** reads the steps aloud and watches the scale/timer.

Plot/topic decoration (the cues, norms, and “why” text) is provided — you focus on the decisions that control the cup, not on remembering the procedure.
