

Worksheet — Session 4: Catch the AI’s Mistakes

*Pair work. This is a course module a subject-matter expert generated with GenAI and did **not** verify. It looks fine. It isn’t — there are several subtle problems, including at least one that is flatly, confidently wrong. Find them and, for each, say **why** it’s a problem. This is the skill: plausible is not correct. (Your facilitator has the answer key; work it first.)*

(AI-generated draft — “Module 2: Knife Skills” for a beginner home-cooking course)

Module objective: Students will understand professional knife techniques and master the seven classical cuts used in Michelin-starred kitchens.

Live session plan: Students bring their own knives and, working from a blank recipe, type out the full prep sequence from memory while the instructor lectures, then dice an onion at full speed.

Practice hint (provided to students): “*To julienne, just cut it into a julienne. The answer is 2mm — type 2mm.*”

Assessment: Students will be graded on a 100-point scale; 90+ earns an A.

Safety note: A sharp knife is more dangerous than a dull one, so beginners should start with the duller knife available.

Find the problems

List what’s wrong and why: 1. _____ 2. _____ 3. _____
4. _____ 5. _____

When you’ve listed everything you can find, check against your facilitator’s answer key — then talk through the one you’d have shipped by mistake.
